C ONTENTS

Foreword	xiii
Chapter 1 Executive Summary	1-1
Chapter 2 Ceramics Industry	2-1
2.1 Key Monolithic Ceramics	2-1
Silicon Nitride	2-2
Aluminum Oxide	2-6
Silicon Carbide	2-8
Transformation-Toughened Zirconia	2-10
Toughened Aluminum Oxide	2-12
Other Monolithic Ceramic Material Options	2-12
2.2 Ceramic Coatings	2-13
2.3 Refractories	2-13
2.4 Ceramic Matrix Composites	2-14
Discontinuous Reinforced Ceramic Composites	2-16
Continuous Reinforced Ceramic Composites	2-16
SiC Matrix CFCCs	2-17
Oxide Matrix CFCCs	2-19
2.5 Summary	2-23
2.6 References	2-26
Publications	2-26
Information Supplied by Industry Representatives	2-27
Chapter 3 Chemical Industry	3-1
3.1 Process Overview	3-1
3.2 Reactors	3-5
3.3 Heat Exchangers	3-11
3.4 Separation	3-13
3.5 Fluid Handling	3-15
3.6 Finished Product Manufacturing	3-18
Consumer Items	3-18
3.7 Communitation	3-20
3.8 References	3-22
Publications	3-22
Information Supplied by Industry Representatives	3-22
Chapter 4 Forest Industry	4-1
4.1 Woodyard	4-2
4.2 Pulp Preparation	4-2
Mechanical Pulping	4-4
Chemical Pulping	4-5
4.3 Bleaching	4-6

4.4	Paper Machine	4-7
	Forming and Pressing Sections	4-8
	Drying Section	4-10
4.5	Chemicals, Water, and Energy Recycling	4-11
	Recovery Boiler	4-11
	Alternative Black Liquor Recovery	4-12
	Chemicals Recovery from Smelt	4-12
	Power Generation	4-13
	Water Treatment and Recycling	4-13
4.6	Summary of Potential Applications of Ceramic-Based Materials in theFor est Products Industry	4-13
4.7	References	4-15
	Publications	4-15
	Information Supplied by Industry Representatives	4-15
Chapter 5	Steel Industry	5-1
5.1	Process Overview	5-1
5.2	Integrated Steel-Making Process	5-3
	Blast Furnace Process	5-5
	Basic Oxygen Furnace Process	5-5
5.3	Electric Arc Furnace Steel-Making Process	5-6
5.4	Ladle Refining Process	5-8
5.5	Steel Casting	5-9
5.6	Forming and Finishing	5-13
5.7	References	5-16
	Publications	5-16
	Information Supplied by Industry Representatives	5-16
Chapter 6	Glass Industry	6-1
6.1	Batching	6-2
6.2	Melting	6-2
	Combustion-Heated Furnaces	6-2
	Electrically Heated Furnaces	6-6
6.3	Refining	6-7
6.4	Flat Glass	6-8
6.5	Container Glass	6-11
	Forming	6-11
6.6	Fiber Glass	6-14
	Batching	6-14
	Melting	6-15
	Fiberization	6-16
6.7	Specialty Glass	6-17
6.8	References	6-19
	Publications	6-19
	Information Supplied by Academia and the Glass Industry	6-19
Chapter 7	Aluminum Industry	7-1
7.1	Primary Product Sector	7-1
	Bayer Process	7-1
	Hall-Hérout Process	7-3
	Alternate Processes	7-5
	Recycling	7-6
	Summary of Potential Applications of Ceramic-Based Materials inthePrimary Pr oduct Sector	7-6

7.2 Semifabricated Sector	7-7
Purification	7-8
Melting and Holding Furnaces and Transfer Troughs	7-8
Ingot Casting	7-9
Rolling and Extrusion	7-10
Summary of Potential Applications of Ceramic-Based Materials in theSemifabricated Sector	7-10
7.3 Finished Product Sector	7-10
Near-Net-Shape Fabrication	7-11
Reduction in Production Cost	7-12
Fabrication of Aluminum Matrix Composites	7-13
Summary of Potential Applications of Ceramic-Based Materials in theFinished Pr oduct Sector	7-13
7.4 References	7-14
Publications	7-14
Information Supplied by Industry Representatives	7-14
 Chapter 8 Metalcasting Industry	 8-1
8.1 Feedstock Preparation, Handling, and Loading into the Melting Furnace	8-1
8.2 Melting and Holding Furnaces	8-2
Refractory Linings	8-2
Thermocouple Protection Tubes	8-3
Burners	8-3
Heat Exchangers	8-4
Composition Sensors	8-4
Nozzles, Valves, Tap-hole Linings	8-5
Molten Metal Pumps	8-5
8.3 Purification, Degassing, Filtration, Metal Transfer	8-5
8.4 Crucibles, Molds, Cores, and Dies for Various Casting Processes	8-6
Sand Casting	8-6
Investment Casting	8-8
Die Casting	8-8
Permanent Mold Casting	8-9
Centrifugal Casting	8-9
Composite Casting	8-10
8.5 Casting	8-10
8.6 Postcasting Process Steps	8-10
Finishing	8-10
Inspection	8-11
Heat Treating	8-11
Heat-Treating Furnace Components	8-12
Heat-Treating Tooling and Fixtures	8-13
Pollution Control in Heat Treating	8-13
8.7 Summary of Potential Applications of Ceramic-Based Materials in theMetalcasting Industry	8-13
8.8 References	8-15
Publications	8-15
Information Supplied by Industry Representatives	8-15
 Chapter 9 Conclusions and Recommendations	 9-1
9.1 Conclusions	9-1
9.2 Recommendations	9-1
Education/Increased Awareness	9-1
Partnership Facilitation	9-2
Technical Challenges	9-3

Appendix	Industry Contributors and Suppliers	A-1
	Table A.1.Monolithic Ceramics	A-2
	Table A.2.Ceramic Matrix Composites	A-3

LIST OF FIGURES

2.1	Ceramic materials can meet crosscutting needs of Industries of the Future	2-1
2.2	Strength, toughness, and uniformity have been dramatically increased since 1960	2-3
2.3	Silicon nitride alloys have evolved from properties comparable to conventional ceramics to very high strength which is retained to high temperatures	2-3
2.4	Comparison of the fracture toughness of new ceramic materials with conventional ceramics and other key structural materials	2-3
2.5	Si ₃ N ₄ can withstand the severe conditions of cutting metal and has resulted in dramatic improvements in the efficiency of machining cast iron	2-5
2.6	Si ₃ N ₄ bearings, check valve balls and other high-strength, wear-resistant components from Saint-Gobain/Norton Advanced Ceramics, East Granby, Conn	2-5
2.7	Si ₃ N ₄ components from Ceradyne, Inc., Costa Mesa, Calif.	2-5
2.8	Si ₃ N ₄ gas turbine engine radial rotor from AlliedSignal Ceramic Components.	2-6
2.9	Silicon nitride tooling designed for immersion in molten aluminum	2-6
2.10	Al ₂ O ₃ tiles provide reliable wear-resistant surfaces on chutes, fans, housings, pipes, and cyclones in handling systems for pulverized coal, grain, ore, and other flowing abrasive materials	2-6
2.11	Alumina is used extensively for face seals and various types of valve and pump components	2-8
2.12	Thread guides of alumina and other ceramic materials	2-8
2.13	Hexoloy SP SiC seal surfaces showing the dispersion of spherical pores which act as fluid reservoirs and reduce friction and wear	2-9
2.14	SiC seal and pump parts	2-9
2.15	Variety of SiC parts for wear-resistance applications, thermal applications and semiconductor industry applications	2-11
2.16	Microstructure of one form of transformation-toughened zirconia	2-11
2.17	Transformation-toughened zirconia tooling for fabrication of aluminum cans	2-12
2.18	Cramic coating applied by a flame spray molten particle deposition method	2-13
2.19	Comparison of failure modes for monolithic ceramics and CFCCs	2-15
2.20	Typical microstructure for a discontinuous reinforced ceramic composite (SiC/Al ₂ O ₃ -Al)	2-16
2.21	SiC _w /Al ₂ O ₃ cutting tools.....	2-16
2.22	Examples of discontinuous reinforced industrial wear parts	2-17
2.23	Typical microstructure of a SiC/SiC CFCC	2-17
2.24	Flowchart for the processing of CFCCs by chemical vapor deposition	2-18
2.25	Flowchart for the processing of SiC CFCCs by resininfiltration, meltinfiltration, or nitridation	2-18
2.26	SiC matrix CFCC hot gas recirculating fan manufacturing using chemical vapor infiltration	2-20
2.27	SiC matrix CFCC radiant burner screen manufactured using chemical vapor infiltration	2-20
2.28	SiC matrix CFCC gas turbine engine combustor liners manufactured using chemical vapor infiltration and tip shroud manufactured using melt infiltration	2-21
2.29	SiC matrix CFCC filters manufactured using chemical vapor infiltration	2-21
2.30	SiC matrix CFCC immersion burner tubes manufactured using nitridation	2-21

2.31	SiC matrix CFCC furnace pipe hangers manufactured using preceramic polymer infiltration ...	2-21
2.32	Flowchart for the processing of Al ₂ O ₃ -Al Matrix CFCCs by direct metal oxidation	2-22
2.33	Alumina matrix CFCC burner stabilizer ring	2-23
2.34	Alumina matrix CFCC heat exchanger headers.	2-23
2.35	Alumina matrix CFCC hot-gas filter	2-23
3.1	Aerial view of a chemical processing plant	3-2
3.2	Modern ethylene chemical process.....	3-3
3.3	Major processes used in petrochemical refining.....	3-3
3.4	Typical materials for elevated-temperature use and their applications in the chemical industry	3-4
3.5	Batch stirred-tank reactor showing (a) heating or cooling coil, (b) motor drive, and (c) baffles	3-5
3.6	Continuous stirred-tank reactor showing (a) liquid feed, (b) gaseous feed, (c) liquid product, and (d) off-gas	3-6
3.7	Tubular reactor showing (a) reactant feed, (b) product, and (c) heating or cooling agent	3-6
3.8	Fixed-bed reactor with incomplete conversion showing (a) reactor, (b) feed preheater, (c) exit cooler, (d) recirculation compressor, and (e) separation chamber	3-7
3.9	Multitubular primary reformer showing (a) gas reaction mixture, (b) gas product, (d) catalyst, and (e) fuel gas for burners	3-7
3.10	Fluidized catalytic cracker showing (a) reactor, (b) stripper, (c) riser, (d) slide valve, (e) air grid, and (f) regenerator	3-8
3.11	Refractory ceramic use in a fluid catalytic cracker unit.....	3-9
3.12	Ceramic steam/methane reformer concept	3-10
3.13	Heat exchanger configurations commonly used in the chemical industry	3-11
3.14	Example of a shell-and-tube heat exchanger	3-12
3.15	Tube-and-sheet SiC heat exchanger	3-13
3.16	Equipment used for solid-liquid separation	3-14
3.17	Example of a gas permeable membrane concept	3-16
3.18	Ball valve with a ceramic-coated ball and ceramic seats	3-17
3.19	Formation of polymer sheet by extrusion through a circular die	3-19
3.20	Textile handling machine	3-20
3.21	Ceramic textile handling parts	3-21
4.1	Key elements of the forest products industry pulp and paper segment	4-2
4.2	Schematic illustrating a modern paper mill using the kraft chemical pulping process	4-3
4.3	Current and potential applications of ceramic-based materials in the woodyard	4-4
4.4	Schematic of a typical groundwood machine	4-4
4.5	Schematic of a disk refiner machine for mechanical pulping	4-4
4.6	Current and potential uses of ceramics in pulp digestion	4-5
4.7	Current and potential uses of ceramics in bleaching	4-6
4.8	Alumina ceramic liners for hydrocyclone cleaners	4-7
4.9	Current and potential uses of ceramics in the paper machine	4-8
4.10	Schematic showing some of the components in the fourdrinier and first press section of a paper machine	4-9
4.11	Ceramic foil and suction box cover segments	4-9
4.12	Assembled Wilbanks ceramic suction box cover segment ready for installation into a paper machine	4-9
4.13	Ceramic matrix composite radiant burner heat source with potential for paper coating drying	4-10
4.14	Current and potential uses of ceramics in chemicals recycling	4-11

5.1	Overview of steel-making process	5-2
5.2	Integrated steel mill	5-3
5.3	Minimill	5-3
5.4	Integrated steel-making process	5-4
5.5	Tap hole gun	5-6
5.6	Electric arc furnace	5-7
5.7	Steel ladle refining processes	5-9
5.8	Steel-casting operations	5-10
5.9	Steel-casting flow control	5-11
5.10	Steel-casting flow control devices	5-11
5.11	Two-piece tundish nozzle	5-12
5.12	Steel forming and finishing operations	5-14
6.1	Examples of glass industry products	6-1
6.2	Typical side-fired flat glass melt furnace	6-3
6.3	Refractories commonly used in a soda-lime glass melt furnace	6-3
6.4	Example of a gas-fired furnace burner	6-4
6.5	Batch and cullet preheating system	6-5
6.6	Electric melt furnace for producing chopped fiber	6-6
6.7	PPG float glass process	6-8
6.8	Fused silica rollers used in a lehr	6-10
6.9	Single gob feed cycle	6-11
6.10	Container press-and-blow forming operation	6-12
6.11	Gas-fired glass annealing furnace with an internal belt return	6-13
6.12	Example of a bottom entry electrode electric glass melter	6-15
6.13	Example of a wool forming process	6-16
6.14	Example of a textile forming process	6-17
7.1	Schematic of the Bayer Process for extracting aluminum oxide powder from bauxite ore	7-2
7.2	Schematic of a typical Hall-Héroult cell for electrolytic smelting of aluminum metal	7-3
7.3	Schematic illustrating an aluminum smelting electrolytic cell with Soderberg anode	7-4
7.4	Schematic of an alternative electrolytic cell for extracting aluminum metal from aluminum oxide	7-6
7.5	Silicon nitride tubes used successfully in Japan in an immersion heater for melting aluminum	7-8
7.6	Silicon nitride degassing pipe and rotor used to stir molten aluminum and bubble gases for removal of hydrogen	7-9
7.7	Pump for transfer of molten aluminum, constructed with silicon nitride shaft, impeller, body column, liner ring, and casing liner	7-12
7.8	Silicon nitride sleeves for aluminum die-casting machine	7-12
8.1	General process steps to produce a metal product by casting	8-2
8.2	Areas where advanced ceramic-based materials can provide benefits in melting and holding furnaces	8-2
8.3	Si ₃ N ₄ thermocouple protection tubes	8-3
8.4	Closed-end ceramic matrix composite radiant immersion tubes consisting of silicon carbide fiber-reinforced nitride-bonded silicon carbide being developed for aluminum melting	8-3
8.5	Si ₃ N ₄ support fixtures for induction heating operations	8-4
8.6	Silicon carbide heat exchanger tubes	8-4
8.7	Areas where advanced ceramic-based materials can provide benefits in purification, degassing, filtration, and metal transfer	8-5

8.8	Reticulated foam filters	8-6
8.9	Areas where advanced ceramic-based materials can provide benefits for tooling hardware in metalcasting processes	8-6
8.10	Investment casting mold cut away to show a core inserted in the interior of one of the gas turbine engine blade mold cavities.....	8-8
8.11	Areas where ceramic-based materials can benefit the post-casting process steps of finishing, inspection, and heat treating.....	8-10
8.12	Silicon carbide ceramic links for a continuous powder metal sintering furnace	8-12

LIST OF TABLES

1.1	Application areas where ceramic-based materials can benefit multiple industries and provide high return on investment	1-2
2.1	Production applications of silicon nitride	2-4
2.2	Production applications of aluminum oxide ceramics	2-7
2.3	Comparison of the corrosion in liquids of relatively pure SiC with other materials	2-9
2.4	Production applications of silicon carbide	2-10
2.5	Some production applications of transformation-toughened zirconia	2-12
2.6	Representative ceramic composite suppliers	2-15
2.7	Typical material properties for a SiC matrix CFCC	2-18
2.8	Applications being considered for SiC matrix CFCCs	2-20
2.9	Typical material properties for an alumina matrix CFCC	2-22
2.10	Applications being considered for alumina and mullite matrix CFCCs	2-22
3.1	Opportunities for advanced ceramics in chemical processing reactors	3-10
3.2	Opportunities for advanced ceramics in chemical processing heat exchangers	3-14
3.3	Opportunities for advanced ceramics in separation	3-16
3.4	Opportunities for advanced ceramics in chemical processing fluid handling	3-18
3.5	Opportunities for advanced ceramics in chemical processing finished product manufacturing	3-21
4.1	Opportunities for ceramic-based materials in the modern paper mill	4-14
5.1	Opportunities for advanced ceramics in the integrated steel-making process	5-7
5.2	Opportunities for advanced ceramics in the electric arc furnace steel-making process	5-8
5.3	Opportunities for advanced ceramics in ladle refining	5-10
5.4	Opportunities for advanced ceramics in steel casting	5-13
5.5	Opportunities for advanced ceramics in steel forming and finishing	5-15
6.1	Opportunities for advanced ceramics in glass melt furnaces	6-7
6.2	Opportunities for advanced ceramics in flat glass manufacturing	6-10
6.3	Opportunities for advanced ceramics in container glass manufacturing	6-14
6.4	Opportunities for advanced ceramics in fiber glass manufacturing	6-18
7.1	Opportunities for ceramic-based materials in the primary products sector of the aluminum industry	7-7
7.2	Opportunities for ceramic-based materials in the semifabricated sector of the aluminum industry	7-11
7.3	Opportunities for ceramic-based materials in the finished product sector of the aluminum industry	7-13
8.1	Metals processed by casting	8-1
8.2	Potential applications in the metal casting industry	8-13
9.1	Application areas where ceramic-based materials can benefit multiple industries and provide high return on investment	9-2

FOREWORD

This study was performed in partnership by the U.S. Department of Energy (DOE) Office of Industrial Technology (OIT) and the United States Advanced Ceramics Association (USACA). Its purpose is to educate the materials community and the industrial sector (aluminum, chemicals, forest products, glass, metalcasting, refining, and steel) on advanced ceramics as a new generation of materials for industrial applications. As outlined in the results of the study, advanced ceramics—refractories, monolithic ceramics, ceramic composites, and coatings—have the potential to help the Industries of the Future Program meet the industries’ goals described in their visions and roadmaps. Ceramics are already fulfilling some of the needs in the Industries of the Future and other related industries.

Denise Swink
Deputy Assistant Secretary
Office of Industrial Technology

The needs and opportunities highlighted in this report will continue to be explored, and resulting developments made in partnership with industry will become part of a portfolio of services provided in support of the Industries of the Future. Through the integrated delivery approach, OIT focuses on making individual companies aware of all potentially applicable technologies, tools, expertise, and funding while providing the right services to meet the customer’s needs.

I hope that this document provides a greater understanding of the potential of ceramics, stimulates advances in the technology, and encourages new alliances and partnerships. I look forward to seeing some of these vision opportunities turn into reality.
